PHCP Exploring Laminitis with New Images with Paige Poss (1.5 CE)

07:00 PM - 08:30 PM EST

Kathy Coleman,

barefoot@progressivehoofcare.org

Exploring Laminitis with New Images with Paige Poss

Laminitis is a nuanced problem with internal damage that can range from mild to catastrophic. In this webinar, we will explore tissue changes observed during dissections. The goal is to deepen your understanding of the problems you face in your work. Paige will help you to understand that the purpose of our work as hoof care providers is to protect the tissues within the hoof from damage and to set the hoof up for healing.

*We protect the tissues, but we do not actually heal the horses we work with.
Understanding the types of damage will help you protect the foot from further harm.*

Presenter:

Paige Poss has dedicated over 25 years to the hoof care industry, where she specializes in trimming horse hooves, conducting distal limb anatomy studies, and creating educational materials. Holding a BS degree in Animal Science from North Carolina State University, Paige initially ventured into the field as a lab tech at various research facilities. However, her journey took a turn in 1999 when a lame horse ignited her passion for hoof care. In collaboration with her business partner, Jenny Edwards, Paige co-founded Anatomy of the Equine, LLC, a platform that publishes and sells education materials tailored for farriers and veterinary professionals. Paige's unique approach blends her love for photography, science, anatomy and art. Her fascination with hoof and horse anatomy has led her to dissect and photographically document hundreds of lower legs and even whole horses.

Her most impactful dissection images, to date, focus on the palmar digital nerve as it descends deep into the hoof capsule. In 2020, Paige stepped back into the academic field and was asked to set up and manage the anatomy lab at the new University of Arizona College of Veterinary Medicine. She worked in this lab from 2020-2022 before returning to trimming and lecturing independently. As of 2024, Paige has delved into researching Equine Metabolic Syndrome as a lab tech at the University of Arizona. Paige's unwavering commitment to understanding hoof mechanics, coupled with her technical skills, positions her as a trailblazer in the industry. Her dissections and clinics provide a creative and encouraging platform for others to explore hoof mechanics. Through her passion for teaching, Paige creates powerful images that not only educate but also inspire a deeper appreciation for the intricate world of horse anatomy. Paige continues to actively participate in clinics and speaking engagements, sharing her wealth of knowledge and experience. Currently residing in the Sonoran Desert in Tucson, AZ, Paige shares her home with her husband, cats, dog and horses.

A recording of this webinar will be available to view as many times as you would like for 6 months following the live event.

April 18, 2026

1-Day Integrative Hoof Care Mini Clinic - VIC, Australia (8.5 CE)

Gordon, VIC, Australia

09:00 AM - 05:00 PM AEST

Daisy Bicking, (610) 425-2542

daisy@daisybicking.com

Curious about Integrative Hoofcare? Join us for a day of discussion and live horse demos about helping the hoof and horse using the Postural Model of Integrative Hoofcare™.

Learn how making specific hoofcare choices for the horse can greatly reduce stress on the horse and minimize detrimental compensation for domestication throughout its lifetime, leading to sounder, healthier horses.

Morning: Lecture, discussion, and Q&A

Afternoon: Live horse demonstrations applying the concepts discussed in the morning.

Demo #1: Horse and hoof assessment, making an integrative hoofcare plan, hoof trimming and application of glue-on composite shoes to help the horse. Demo #2: the same process using metal shoes as the material of choice to help the horse.

Stay for the optional Forge Night with experienced farriers who can help you learn to work around the forge!

It's going to be an exciting event! See you there!

April 19, 2026

- April 23, 2026

ISIH Horse & Hoof 5 Day Clinic - VIC, Australia (40 CE)

Horse Shepherd Equine Sanctuary

Gordon, VIC, Australia

,

08:00 AM - 05:00 PM AEST

Wes Stewart, 0412 289411

wesley@wes-the-farrier.com

Presented by The International School of Integrative Hoofcare

See flyer for additional details

April 26, 2026

- April 28, 2026

Rood & Riddle International Podiatry Conference (24 CE)

Rood & Riddle Equine Hospital

2150 Georgetown Road

Lexington, KY

08:00 AM - 05:00 PM EST

Whitney Fields, 859-233-0371

wfields@roodandriddle.com

The Rood & Riddle International Podiatry Conference has both lectures and demonstrations. It is open to farriers and veterinarians. This course has been approved for 15 hours of CE RACE credit.

Registration is available at this link: <https://pci.jotform.com/form/252595502598165>

Registration fee is \$985.00.

May 3, 2026

Dave and Jay Farley at Lester Yoders Horseshoeing Shop (7 CE)

Lester Yoders Shop

08:00 AM - 04:00 PM EST

Lester Yoder, (330) 473-7078

8am to 4pm . Dave and Jay Farley will teach/lecture on efficiency at the rig and under the horse. 2 live horses will be shod.

May 23, 2026
- May 25, 2026

PHCP Anatomy, Trimming and Hoof Protection ? Colorado (24 CE)

09:00 AM - 05:00 PM MST

Philip Himanka, 858-882-7209

barefoot@progressivehoofcare.org

This three-day clinic fulfills the beginner series clinic requirement for PHCP students.

Days 1 and 2 will cover anatomy and trimming.

Day 3 will cover hoof protection and shoe removal.

Some of the topics covered:

- Basic distal limb anatomy*
- Exploration of anatomy through cadaver trimming and dissection*
- Trimming with power tools and grinder safety*
- Shoe removal for ease and comfort to both horse and trimmer*
- Transitioning to barefoot*
- Alternative forms of hoof protection*
- Fit and use of a wide variety of boots including EasyCare, Scoot Boots, Renegades, Soft Rides, Cavallo, Equine Fusion and more, based on performance, rehab or rider needs (glue on protection is not included in this clinic)*
- How and when to use hoof casting*
- Which padding options to utilize for various pathologies and rehab needs*
- How to perform modifications and repairs to hoof boots*
- Casting and booting on live horses*

Prerequisites:

Read through the PHCP Introduction to Equine Diet and Lifestyle.

Study the PHCP Introduction to Equine Hoof Anatomy.

Visit Anatomy of the Equine to get familiar with the distal limb anatomy before you attend the clinic. Consider purchasing online coursework and ebooks.

When: Start time is 9:00 am each day and we'll finish up at 5:00 pm.

What to bring:

If possible, students should bring their own tools (gloves, apron, nippers, rasp, knife, hoof pick, shoe pullers, and stand) but we will have some to share.

If you have a cadaver leg of your own you would like to dissect with us please let us know and bring it along. Cadaver legs are getting harder to come by and can be quite expensive. If you have access to some we would be grateful.

Please bring your own lunch to eat on location. There are plenty of places to pick up prepared food in the area ahead of time. We will take an hour lunch break from 12-1 pm.

Accommodations:

Erie is a small town and conveniently located just north of Denver, south east of Longmont, north of Lafayette, and east of Boulder. The clinic is located just north of Erie. Depending on your preferences and budget, there are many options for hotels or AirBnBs (Longmont, Lafayette, Boulder) as well as grocery shopping, and restaurants. Some students have found really nice places to stay using Airbnb. If you have questions about an accommodation, please let me know.

Travel:

Denver International Airport is about a 30-40 minute drive whether via I-70/I-25 or the toll road. Use google maps for directions. Apple Maps won't quite get you there.

It is often cheaper to rent a car than to use Uber or Lyft. I encourage folks to coordinate with other clinic attendees for car rentals and hotels if you'd like to save on money. If you would like to explore this option, text me at 858-882-7209 and I will help put you in touch with other attendees who are also interested in sharing. For parking at the clinic, there is enough parking in the back of the property. Closer to the clinic date, I will email maps, the weather forecast, and more information.

Clinician:

Philip Himanka, PHCP practitioner, mentor, and clinician, also has an APF-I certification with the International Association of Professional Farriers. He has been applying glue-on hoof protection for over 10 years, has 2500+ trims on his books each year and has extensive rehabilitation experience. "I try to learn every day from every horse. I love to teach and help prospective practitioners to be successful." Philip owns and operates Not Only Barefoot Llc in Erie, CO.

Sign up:

- Contact Philip Himanka with any questions at 858-882-7209.*
- Auditing will not fulfill the beginning series anatomy clinic requirement.*
- Cancellations made one month in advance of the clinic start date will receive a full refund. Between a month out and two weeks in advance of the clinic, cancellations will receive a 50% refund.*
- If the clinic is cancelled for any reason and will not take place, the student will receive a full refund.*
- Purchasing refundable airline tickets is recommended.*
- Sign up at <https://progressivehoofcare.org/2025/10/anatomy-trimming-and-hoof-protection-colorado>.*

May 29, 2026
- May 30, 2026

Donkey Hoof Care Clinic (16 CE)

10740 County Road 126

Kiowa, CO 80117

09:00 AM - 05:00 PM MST

Kim Welk, 720 939 6698

burrobasescampco@gmail.com

With clinicians Ross Keller and Kay Keller

Topics will include:

- Donkey behavior and handling*
- Characterizing and grading hoof growth and distortion*
- Donkey hoof care protocols and techniques*
- Bodywork for donkeys*
- Live trim demos*
- Glue shoe modification/fabrication*
- Managing laminitis*
- Trimming grossly overgrown feet*

PHCP Advanced Anatomy and Radiographs ? Colorado (16 CE)

09:00 AM - 05:00 PM MST

Kathy Coleman,
barefoot@progressivehoofcare.org

Effective July 1, 2026, the Advanced Anatomy and Radiographs Clinic will be a required class for PHCP certification. It must be completed prior to submitting the Final Media Presentation.

Day 1 – Advanced Anatomy and Morphology

- Dissection and exploration of the internal and external structures of the foot.*
- We will start with a short review of anatomy; however, participants will benefit greatly from having a basic understanding of the internal and external structures of the foot prior to attending.*
- The dissection will be led by the instructor but students will be hands on in helping with the the different stages of the dissection. We will pick two to four hooves that have different morphologies. The number of hooves we dissect may vary depending on what we find and how long we spend with each one. We will compare the differences between healthy and unhealthy structures in each foot. We will learn how to visualize where our internal structures are positioned by reading external landmarks.*
- Examples of common pathologies we will see may include deep sulcus thrush affecting the frog corium, stretched weak lamina, white line infection, wall cracks, P3 remodeling that is visible externally, wall delamination, abscesses, and thin soles.*

Participants will go home with the following abilities to:

- Assess the health of the soft tissue structures in the back of the foot (digital cushion, lateral cartilages, frog corium).*
- Assess and accurately estimate sole depth and medio-lateral balance.*
- Assess palmar/plantar angles.*
- Pinpoint the center of rotation of the coffin joint.*
- Assess P3 position in relation to toe length.*
- Read wear and loading patterns in untrimmed feet. We will speculate on whether the wear we see is static (postural) vs dynamic (created during movement).*

Day 2 – Radiograph Guided Trimming and Dissection

To participate in Day 2 you must have attended Day 1 of this clinic.

- We will use the assessment techniques learned in Day 1 – Advanced Anatomy to make trimming decisions.*
- We will do a basic intro to reading radiographs before we begin the exercise. Feet will be radiographed prior to trimming.*
- We will be able to critically assess how our trim impacts the position of the hoof capsule in relation to the bony column.*
- Each participant will then complete a self guided dissection/exploration of their foot.*

Prerequisites:

- The PHCP Anatomy, Trimming, and Hoof Protection Clinic (or approved substitute outside coursework).*
- A PHCP approved Radiographs class: PHCP's Reading Radiographs for the Hoof Care Practitioner clinic, a PHCP Reading Radiographs webinar, or Dr. Kellon's Basics of Radiographs online course.*
- It is also highly recommended that Paige Poss and Jenny Edwards Anatomy of the Equine online class be completed before the clinic.*

What to bring:

If possible, students should bring their own tools (gloves, apron, nippers, rasp, knife, hoof pick, and stand) but we will have some to share.

If you have a cadaver leg of your own you would like to dissect with us please let us know and bring it along.

Please bring your own lunch to eat on location. There are plenty of places to pick up prepared food in the area ahead of time. We will take an hour lunch break from 12:00 to 1:00.

Accommodations:

Erie is a cute little town and the clinic is located north. Near by hotels (Longmont, Lafayette, Boulder), grocery shopping, and restaurants. Depending on your preferences and budget. Some students have found really sweet places to stay on Airbnb.

Travel:

Denver International Airport is about a 30 minute drive. Use google maps for directions. Apple Maps won't quite get you there.

Most times it's cheaper to rent a car than Uber or Lyft. I encourage folks to coordinate with other clinic attendees for car rentals and hotels if you'd like to save on money. If you would like to explore this option, text me at 858-882-7209 and I will help put you in touch with other attendees who are also interested in sharing. There is enough parking in the back. Closer to the date I will email maps, weather forecast and more information.

Start time is 9:00am each day and we will finish up at 5:00pm.

Clinician:

Philip Himanka is a PHCP certified practitioner, mentor and clinician. He also has the APF-I certification with the International Association of Professional Farriers. PHCP Anatomy, Trimming and Hoof Protection ? Tennessee (24 CE)

09:00 AM - 05:00 PM EST

Kathy Coleman,
barefoot@progressivehoofcare.org

This three-day clinic fulfills the beginner series clinic requirement for PHCP students.

Days 1 and 2 will cover anatomy and trimming.

Day 3 will cover pathology, hoof protection and shoe removal.

Some of the topics covered:

- Basic distal limb anatomy*
- Exploration of anatomy through cadaver trimming and dissection*
- Shoe removal for ease and comfort to both horse and trimmer*
- Transitioning to barefoot*
- Alternative forms of hoof protection*
- Fit and use of a variety of hoof boots, based on performance, rehab or rider needs (glue on protection is not included in this clinic)*
- How and when to use hoof casting*
- Which padding options to utilize for various pathologies and rehab needs*
- Casting and booting on cadaver limbs*

Prerequisites:

Read through the PHCP Introduction to Equine Diet and Lifestyle.

Study the PHCP Introduction to Equine Hoof Anatomy.

Visit Anatomy of the Equine to get familiar with the distal limb anatomy before you attend the clinic. Consider purchasing online coursework and ebooks.

What to bring:

Most of this clinic will take place in a heated shop. A small portion of the time will be in the barn working with live horses, so please dress appropriately. Bring a chair or let me know if you need one. Bring your trimming tools if you are able, an apron or towel for your lap, gloves and safety glasses.

If you have a cadaver leg of your own you would like to dissect with us please let us know and bring it along.

There will be a one hour lunch break. You may bring your own lunch to eat on location or there is a diner 3 miles down the road.

Accommodations:

I highly recommend staying in downtown Bristol for the best food and entertainment options. However, there is a B&B large enough for people to share across the fence from my farm (walking distance to my shop). There are also cheaper hotel options 20 minutes away with food close by. Three options on West State Street, Bristol, TN and two options on Linden Drive, Bristol, VA.

Travel:

People should consider flying into TRI airport and be prepared to rent a car. We are in the country so Uber will be expensive or unrealistic.

**Start time is 9:00 am each day and we'll finish up between 4:00 and 5:00 pm.*

Lorie Fleenor, PHCP practitioner, mentor and clinician, is an 8th generation farmer in Bristol, TN. Knowledge of animal welfare has always been a priority for Lorie, and whole horse hoof care has been her passion since she first learned to trim in 2007. She continues her education so that she can better help people and horses find a pathway to

health and happy trails. Each year, Lorie hosts multiple clinics at her ranch for riding and hoof care, and is very active in her local horse community. Her husband and two children help her on the farm where they run a 265 head cattle operation, board and care for 75 horses, teach riding, and offer training services. She serves clients in Southwest VA and Northeast TN. She has a huge variety of horses, hooves, and pathologies on her farm. The horses live out 24/7 in herds on hilly pastures, so it's fun to watch rehab and healthy hooves happen as new horses come in! As we all know, diet, exercise and the trim go hand in hand!

Lorie can be contacted at Magna Vista Farm in Bristol, TN.

Sign up:

- Contact Lorie Fleenor with any questions about the clinic at bdffandltf@gmail.com.
- Auditing will not fulfill the Beginning series anatomy clinic requirement.
- Cancellations made one month in advance of the clinic start date will receive a full refund. Between a month out and two weeks in advance of the clinic, cancellations will receive a 50% refund.
- If the clinic itself is cancelled for any reason and will not take place, the student will receive a full refund.
- Purchasing refundable airline tickets is recommended.

PHCP Advanced Anatomy and Radiographs ? Tennessee (16 CE)

Magna Vista Farm

09:00 AM - 05:00 PM EST

Kathy Coleman,

barefoot@progressivehoofcare.org

Effective July 1, 2026, the Advanced Anatomy and Radiographs Clinic will be a required class for PHCP certification. It must be completed prior to submitting the Final Media Presentation.

Day 1 – Advanced Anatomy and Morphology

Dissection and exploration of the internal and external structures of the foot.

We will start with a short review of anatomy, however participants will benefit greatly from having a basic understanding of the internal and external structures of the foot prior to attending.

The dissection will be lead by the instructor but students will be hands on in helping with the the different stages of the dissection. We will pick 2 to 4 hooves that have different morphologies. The number of hooves we dissect may vary depending on what we find and how long we spend with each one. We will compare the differences between healthy and unhealthy structures in each foot. We will learn how to visualize where our internal structures are positioned by reading external landmarks.

Examples of common pathologies we will see may include deep sulcus thrush affecting the frog corium, stretched weak lamina, white line infection, wall cracks, P3 remodeling that is visible externally, wall delamination, abscesses, and thin soles.

Participants will go home with techniques to:

- Assess the health of the soft tissue structures in the back of the foot (digital cushion, lateral cartilages, frog corium).*
- Assess and accurately estimate sole depth and medio-lateral balance.*
- Assess palmar/plantar angles.*
- Pinpoint the center of rotation of the coffin joint.*
- Assess P3 position in relation to toe length.*
- Read wear and loading patterns in untrimmed feet. We will speculate on whether the wear we see is static (postural) vs dynamic (created during movement).*

Day 2 – Radiograph Guided Trimming and Dissection

To participate in day 2 you must attend day 1 of this clinic.

We will use the assessment techniques learned in the advanced anatomy clinic to make trimming decisions. We will do a basic introduction to reading radiographs before we begin the exercise. Feet will be radiographed prior to trimming. Using this information, we will be able to critically assess how our trim impacts the position of the hoof capsule in relation to the bony column. Each participant will then complete a self guided dissection/exploration of their foot.

Prerequisites:

- The PHCP Anatomy, Trimming, and Hoof Protection Clinic (or approved substitute outside coursework).*
- A PHCP approved Radiographs class: PHCP's Reading Radiographs for the Hoof Care Practitioner clinic, a PHCP Reading Radiographs webinar, or Dr. Kellon's Basics of Radiographs online course.*
- It is also highly recommended that Paige Poss and Jenny Edwards Anatomy of the Equine online class be completed before the clinic.*

Accommodations:

I highly recommend staying in downtown Bristol for the best food and entertainment

options. However, there is a B&B big enough for people to share across the fence from my farm (walking distance to my shop). There are also cheaper hotel options 20 minutes away with food close by. Three options on West State Street, Bristol, TN and two options on Linden Drive, Bristol, VA.

Travel:

People should consider flying into TRI airport and be prepared to rent a car. We are in the country so Uber will be expensive or unrealistic.

**Start time is 9:00 am each day and we will finish up between 4:00 pm and 5:00 pm.*

Clinician:

Lorie Fleenor, PHCP practitioner, mentor and clinician, is an 8th generation farmer in Bristol, TN. Knowledge of animal welfare has always been a priority for Lorie, and whole horse hoof care has been her passion since she first learned to trim in 2007. She continues her education so that she can better help people and horses find a pathway to health and happy trails. Each year, Lorie hosts multiple clinics at her ranch for riding and hoof care, and is very active in her local horse community. Her husband and two children help her on the farm where they run a 265 head cattle operation, board and care for 75 horses, teach riding, and offer training services. She serves clients in Southwest VA and Northeast TN. She has a huge variety of horses, hooves, and pathologies on her farm. The horses live out 24/7 in herds on hilly pastures, so it's fun to watch rehab and healthy hooves happen as new horses come in! As we all know, diet, exercise and the trim go hand in hand!

Lorie can be contacted at Magna Vista Farm in Bristol, TN.

Sign up:

Day 1, Advanced Anatomy and Morphology, may be purchased and attended on its own. To attend day 2, Radiograph Guided Trimming and Dissection, you must attend day 1.

Certified Practitioners auditing will receive 4 CE credits per day.

Cancellations made one month in advance of the clinic start date will receive a full refund. Between a month out and two weeks in advance of the clinic, cancellations will receive a 50% refund.

If the clinic is cancelled for any reason the student will receive a full refund. Purchasing refundable airline tickets is recommended.
